"Pressestimmen '...an excellent book that will be of great value to pharmacists and other healthcare professionals who work in or have a passing interest in this complex area of medicine, and will also be of use to those who teach this challenging subject.' - The Pharmaceutical Journal, 10th October 2018 Buchrückseite de-mystifying the science for nurses and non-scientists The accessible guide to the principles behind new, more targeted drug treatments for cancer Written for anyone who encounters cancer patients, cancer data or cancer terminology, but have no more than a passing knowledge of cell biology, A Beginner's Guide to Targeted Cancer Treatments provides an understanding of how cancer works and the many new treatments available. Using over 100 original illustrations, this accessible handbook covers the biology and mechanisms behind a huge range of targeted drug treatments, including many new immunotherapies. Dr. Vickers translates a complex and often overwhelming topic into something digestible and easily understood. She explains what cancer is, how it behaves and how our understanding of cancer has changed in recent years. Each chapter describes how new cancer drugs work, along with their benefits and limitations. With the help of this book, readers will be able to better understand more complex, in-depth articles in journals and books and develop their knowledge. This vital resource:*

- * Offers the latest insights into cancer biology*
- * Provides a broad understanding of how targeted cancer treatments work*
- * Describes many of the new immunotherapy approaches to cancer treatment, such as checkpoint inhibitors and CAR-modified T cells*
- * Helps readers feel confident discussing treatment options with colleagues and patients*

Provides an overview of which treatments are relevant to each of the most common solid tumours and haematological cancers, and the rationale behind them*

- * Demystifies the jargon - terms such as the EMT, cancer stem cells, monoclonal antibodies, kinase inhibitors, angiogenesis inhibitors, etc.*
- * Explains the resistance mechanisms to many new treatments, including issues such as the way cancer cells diversify and evolve and the complex environment in which they live

Über den Autor und weitere Mitwirkende DR. ELAINE VICKERS is the Founder of Science Communicated Ltd, an independent company creating courses and educational materials that explain cancer biology and the science behind targeted cancer treatments. In partnership with numerous

hospitals, institutes, charities, companies and clinical trials units, her teaching reaches many hundreds of nurses, doctors, pharmacists and clinical trials coordinators each year. Dr. Vickers has a degree in Medical Science from the University of Birmingham and a PhD in Molecular Biology from the University of Manchester. She has been working as a science educator and writer for over fifteen years."

introducing targeted cancer treatments a beginner's

October 26th, 2019 - targeted cancer treatments target specific proteins processes and pathways known to have gone awry in cancer cells many targeted cancer treatments are monoclonal antibodies mabs the idea of using monoclonal antibodies as treatments first became popular in the 1970s but it was in the 1980s that the first antibody was approved for use as a cancer treatment rituximab is now a widely used treatment for some leukemias and lymphomas
