"Pressestimmen 'Roads to Health is a spirited and thought-provoking  
argument for continuity between medieval and modern public health  
activities and for the existence and preeminence of routine practices over  
one-off emergency solutions to public health problems.'--Paolo Squatriti,  
University of Michigan'G. Geltner's Roads to Health transforms our  
understanding of urban life in later medieval Italy, and the premodern  
world more broadly, not simply by recovering the activities of officials in  
charge of urban infrastructure and the courts that adjudicated their work  
but also by pushing the chronology of these 'healthscaping' efforts into the  
period before the arrival of the Black Death. Geltner's book is as important  
for historians of medicine and urban life as it is for historians of public  
health. A singular achievement.'--Monica Green, Arizona State  
University'Consistently original and innovative, Roads to Health is a major  
contribution to the study of public health and medieval urban life. It  
furnishes incontestable documentary proof that northern Italian towns

adopted a proactive approach to issues of environmental health long before the Black Death, while developing sophisticated legal and administrative structures to ensure compliance 'on the ground.'--Carole Rawcliffe, University of East Anglia'A field-changing book, Roads to Health shatters the prevailing narrative that public health administration emerged from industrialization and other processes of Euro-American modernization. Combining richly documented detail and bold historical sweep, G. Geltner demonstrates that teleological assumptions have obscured the history of premodern public health policies, practices, and preventive theories; have distorted efforts to historicize governmentality and biopower; and are complicit with agendas that have claimed public health as a characteristic of civilized, Western modernity.'--Kathleen Davis, University of Rhode Island Über den Autor und weitere Mitwirkende G. Geltner is Professor of History at the University of Amsterdam and author of several books, including The Making of Medieval Antifraternalism: Polemic, Violence, Deviance, and Remembrance, The Medieval Prison: A Social History, and Flogging Others: Corporal Punishment and Cultural Identity from Antiquity to the Present."
