"Críticas 'Buy it for its excellent text and celebrate the fact that the contributors are such articulate horticulturists, capable of presenting so clearly an increasingly important aspect of the use of plants in public open space.' ? Peter Thoday, *The Horticulturist* 'This is a much-needed book containing vast amounts of useful information ... It should help all those involved in the design and management of public landscapes to take the plunge into naturalistic planting.' ? Isabelle van Groeningen, *Garden Design Journal* March 2005 'Its clear and easy-to-read text will be of value to all working in amenity horticulture and the design and management of public greenspace. It is a textbook for social horticulture, but of real interest to everyone who has an interest in plants. I can think of very few IoH members who would not be delighted to own this book.' ? Peter Thoday, *The Horticulturist* Reseña del editor The last quarter of the twentieth century witnessed a burgeoning interest in ecological or naturally inspired use of vegetation in the designed landscape. More recently a strong aesthetic element has been added to what was formerly a movement aimed at creating nature-like landscapes. *The Dynamic Landscape* advances a fusion of scientific and ecological planning design philosophy that can address the need for more sustainable designed landscapes. It is a major statement on the design, implementation and management of ecologically inspired landscape vegetation. With contributions from people at the forefront of developments in this field, in both Europe and North America, it provides a valuable synthesis of current thinking. Biografía del autor Nigel Dunnett and James Hitchmough have a wide experience of theory and practice in contemporary planting design in Europe, North America and Australia, and are leading academic researchers in the field of new sustainable landscape plantings. Both are based at the University of Sheffield."

landscape ecology aims and scope springer

May 15th, 2020 - landscape ecology is the flagship journal of a well established and rapidly developing interdisciplinary science that focuses explicitly on the ecological understanding of spatial heterogeneity landscape ecology draws together expertise from both biophysical and socioeconomic sciences to explore basic and applied research questions concerning the ecology conservation management design
