"Synopsis In November 1969 two more humans set foot on the lunar surface, in the process, further reinforcing the indisputable pre-eminence of the United States as the world's greatest technological power. There was no longer any need to establish the high ground in the ideological struggles of the Cold War. Charles 'Pete' Conrad, Alan Bean and Richard Gordon were making the voyage with higher goals in mind - further testing the technology and making a start on real lunar science. The average person may look into the following pages and see only statistics and charts but if you look hard enough you can see that they contain the hard-earned kernels of our collective future, a future as a space-faring civilisation.

Captured here are the details of leaky spacesuits, rockets struck by lightning, spacesuit cooling systems which stop working because the spacecraft's door got stuck closed and cameras which were disabled by dust. Or the details of the pinpoint landing by Pete Conrad, through a pall of lunar dust so thick he couldn't see his landing site from 40 feet away. If you want to know why that TV camera failed or just how badly decomposed the robotic Surveyor had become after three years on the moon, it's all here, accompanied by hours of rare and unique video of the Apollo 12 mission. DVD-Video includes: Unique synchronised film and audio of the lunar landing, rendezvous and docking. Rare training footage of the crew aboard the KC-135, launch footage, multi-camera EVA film and more! Hours of video! Über den Autor und weitere Mitwirkende **Scott P. Sullivan** is a freelance mechanical designer and artist. His design portfolio includes work for Rayovac, Warner Bros., and Intel."
